

Weill Cornell Medicine

Hospital Medicine Point of Care Ultrasound
(HM POCUS) Program

POCUS Case Conference

Case Hx

CC: 81 yo man a/w progressive SOB x 2 weeks. Much worse x 3 days.

PMHx:

- lung cancer s/p XRT and chemo
- Was on immunotherapy, d/c'd secondary to side effects
- h/o of endovascular AAA repair 1 month PTA
- H/o DVT and PE, s/p IVC, on xarelto, self d/c'd 2 days PTA
- h/o mildly decreased EF w/ SWM abnormalities
- 7d PTA seen in office of vascular surgeon, CT showed b/l pleural effusion

Labs

Labs:

- AKI 0.9 to 2.2
- Normal WBC, unimpressive Hb
- BNP 2,800

PORTABLE

12/9/2018 8:08:22 PM

ERECT

Exam

- Working Dx: CHF – Lasix in the ER
- On exam: tachypneic, hypoxemic, using accessory muscles.
- Other vitals stable
- Lungs: decreased
- Distended abdomen
- Normal JVP
- b/l LE edema

C1-5 Bladder MI 1.2 TIs 0.7

Formulae

WCMC: $V = W \times L \times H \times 0.52$ (prolate ellipsoid)

error:

25% (Hakenberg, O.W., et al. J Urol 1983;130:249-51)

“with in 25%” (Dicuio, M., et al., Archivio Italiano di Urologia e Andrologia 2005; 77, 1)

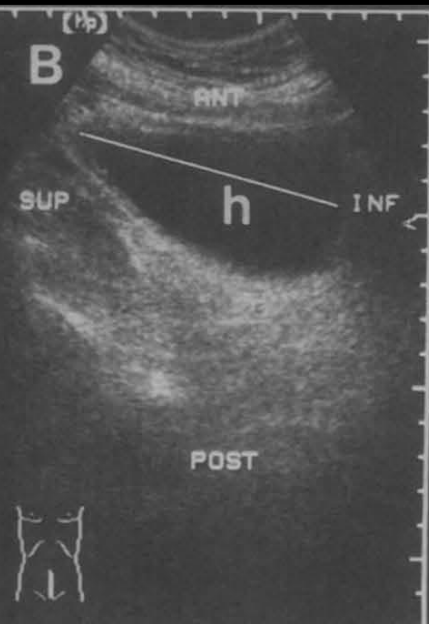

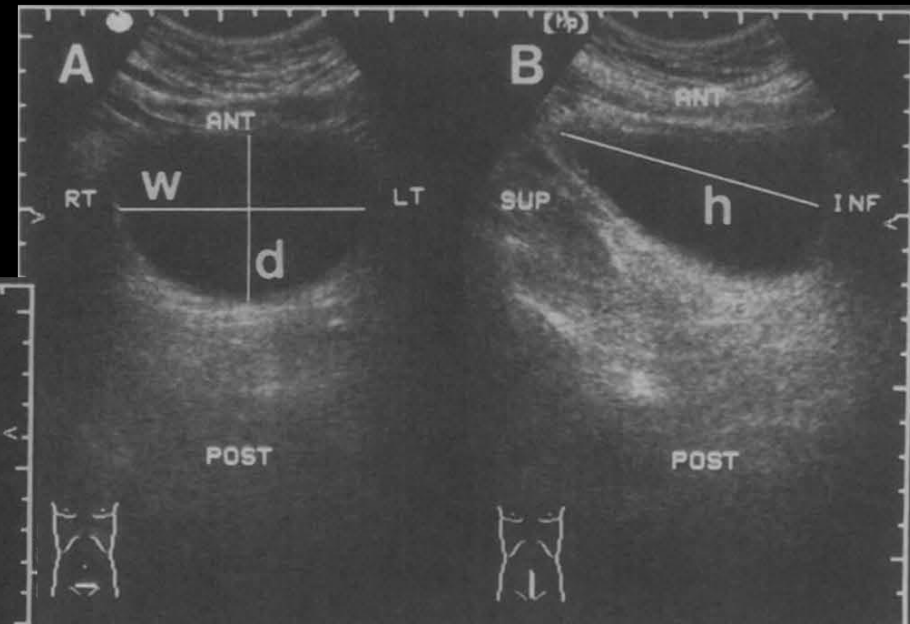

38% (Bih L-I., et al. Archives of Physical Medicine and Rehabilitation 1998;79:1553-6)

Soni: $V = W \times L \times H \times 0.75$ (Chan H. Journal of Neuroscience Nursing 1993: 25(5):309-312)

US Bladder Volume Estimation

- 24 healthy volunteers + 55 spinal cord injury pts
- Prospectively tested 10 published formulas
- Overall best formula: $H \times D \times W \times 0.7$. Mean error $17.4\% \pm 11.6\%$

“Ellipsoid”

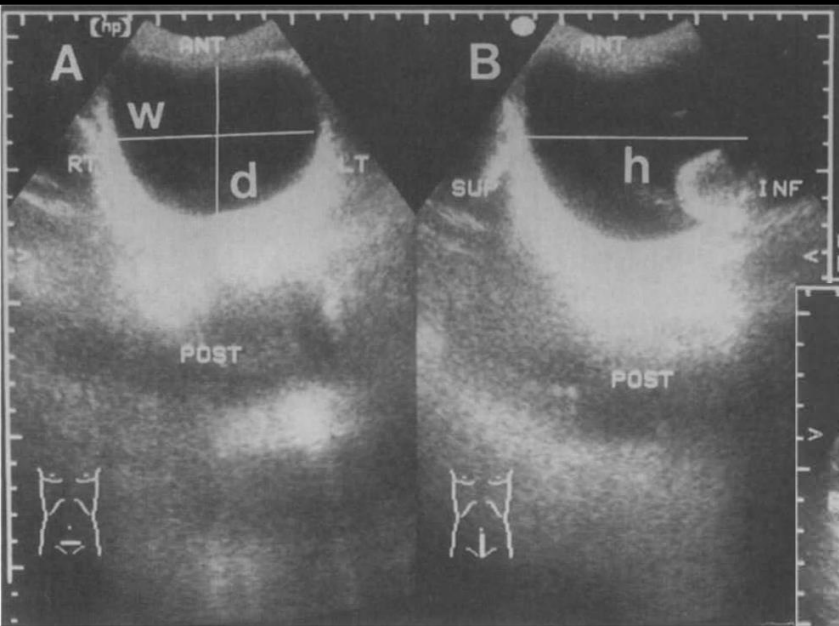

“Cuboid”

“Triangular Prism”

3 Bladder Geometries

“Ellipsoid”

“Cuboid”

“Triangular Prism”

3 Bladder Geometries

1. If the bladder appeared to be four-sided on both transverse and longitudinal scans and opposite edges were parallel and similar in length, the shape was considered **cuboidal**.
2. If the bladder appeared to be round or elliptical on both transverse and longitudinal scans and the edges were approximately parallel in the upper or middle portion of the longitudinal scan, the shape was considered **ellipsoid**.
3. If the bladder appeared to be triangular or pear-shaped on the longitudinal scan and had a distinct upper tip and flat bottom, the shape was considered a **triangular prism**.

3 Bladder Geometries

“Ellipsoid”
 $H \times D \times W \times 0.8$

“Cuboid”
 $H \times D \times W \times 0.9$

“Triangular Prism”
 $H \times D \times W \times 0.7$

3 Bladder Geometries

“Ellipsoid”
 $H \times D \times W \times 0.8$

“Cuboid”
 $H \times D \times W \times 0.9$

“Triangular Prism”
 $H \times D \times W \times 0.7$

Table 2: Distribution of Bladder Shapes
